第十一節作業

1、製作一個資料庫 db_name 規格如下：

```
table1
=================================
Username      Password
CHAR(10)      CHAR(10)
-------------------------------
tony          1234
marry         4567
```

2、建立一個 add.php 檔案，可以輸入以下網址，輸入資料。

http://127.0.0.1/add.php?username=bill&password=7897

3、建立一個 update.php 檔案，可以輸入以下網址，修改資料。

http://127.0.0.1/update.php?username=tony&password=7897

4、My database db_name has one table named "emp_info" and it has two columns. "employee name"

and "employee no". "employee no" is the primary key.

Field	Type	Null	Key	Default	Extra
employee name	varchar(50)	NO		NULL	
employee no	int(50)	NO	PRI	NULL	

5、Use following PHP script to fetch data from the database and to encode data in to json format.
